MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE

DOMINION OF CANADA

NOVEMBER 1932

TEMPERATURE

Except in southern British Columbia, parts of the Atlantic provinces and in Hudson Strait this November was colder than a normal November throughout Canada. In southern British Columbia the excess was one to three degrees. In southern New Brunswick and parts of Nova Scotia there was an excess of one or two degrees while in the Hudson Strait region the excess was one to four degrees.

In the Yukon territory and the lower Mackenzie valley there was a deficiency of five to fifteen degrees. In the Peace and Athabasca valleys and northern Manitoba the deficiency was four to seven degrees. Over the prairies the deficiency was one to four degrees except in the extreme south of Alberta where there was a slight excess.

In northwestern Ontario the deficiency was one to six degrees while in southern Ontario temperatures varied from about normal on the shore of Lake Ontario to four degrees below normal in the Lake St. Clair region.

In Quebec the deficiency was generally about three degrees although some parts of the Laurentian Hills reported six degrees below normal.

In northern New Brunswick there was a deficiency of one to four degrees. In the Annapolis valley of Nova Scotia temperatures were about normal while in other parts of Nova Scotia, in Prince Edward Island and southern and southeastern New Brunswick there was an excess of one to two degrees.

PRECIPITATION

Precipitation was generally above normal in British Columbia, Alberta, southeastern Saskatchewan, Manitoba, a large part of Ontario and western Quebec and locally in Nova Scotia.

Generally in British Columbia there was an excess of thirty to fifty per cent. while in some parts of the interior more than twice the normal amount was recorded.

In Alberta the excess was small while in Saskatchewan, except for parts of the south, the total was slightly below normal.

In Manitoba where the normal November precipitation is generally from three quarters of an inch to one and one-half inches the total amount this month ranged from one to four inches.

From the Lake of the Woods to Lake Superior several stations reported more than twice the normal amount. In northern Ontario east of Lake Superior and north to James Bay precipitation was about normal. It was deficient in the Georgian Bay, Lake Huron and Lake St. Clair regions by ten to thirty per cent. Along Lakes Erie and Ontario and in the upper St. Lawrence and lower Ottawa valleys there was a general excess for the most part ranging from twenty to thirty per cent.

In eastern Quebec and most of the Atlantic provinces there was a deficiency varying widely from ten to sixty per cent. There were, however, local excesses in Nova Scotia.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month; Column Sg denotes depth of snow on ground in inches, where given.
